# Hackathon

# Challenge Development

For this year's Hackathon, all of the challenges were centred around UN **SDG 1 - Ending Poverty in All its Forms**. The challenges were developed by the WED working Group, in collaboration with **Engineers Without Borders**.

## CHALLENGE 1

**Improving the climate resilience of subsistence farming**

## CHALLENGE 2

**Addressing informal housing and infrastructure challenges in urban areas**

## CHALLENGE 3

**Empowering women to overcome poverty through digital technologies**

# Registrations

For 2025, we set a new record for Hackathon registrations, with **2,998 individuals registering** from **90 countries**. This is a **20% increase** from the previous year (2508 registrations).

The **Middle East, Asia**, and **Africa** were the most common regions for registrations.

**Saudi Arabia** was the most popular nation for sign-ups, with **37%** of all registrations (1103).

3K

Registrations

90

Countries

20%

Increase in registrations  
over previous year

# Education

## Educational level

The majority of registrants (**72%**) were undertaking tertiary education, with **61%** currently studying for or holding a **Bachelor's Degree**. **17%** of registrations were from students in High school.

## Field of Study

Among university students, the most popular field of study was **Civil Engineering (18%)**, followed by **Electrical** and **Mechanical Engineering**.

# Education

Data Tables

Field of Study (University students) ▾

Field of Study	Amount	Percent
Civil Engineering	393	18 %
Electrical Engineering	321	14.7%
Mechanical Engineering	269	12.3%
Computer Engineering	249	11.4%
Chemical Engineering	75	3.4%
Structural Engineering	45	2.1%
Bio Medical Engineering	38	1.7%
No specialization	10	0.5%
Other	476	21.8%
No response	309	14.1%

Registrations (by level of Education) ▾

Highest Level of Education	Amount	Percent
High School/Secondary school	511	17.0%
Diploma/College	302	10.1%
Bachelor's degree	1825	60.9%
Master's degree	297	9.9%
PHD/Doctorate	63	2.1%

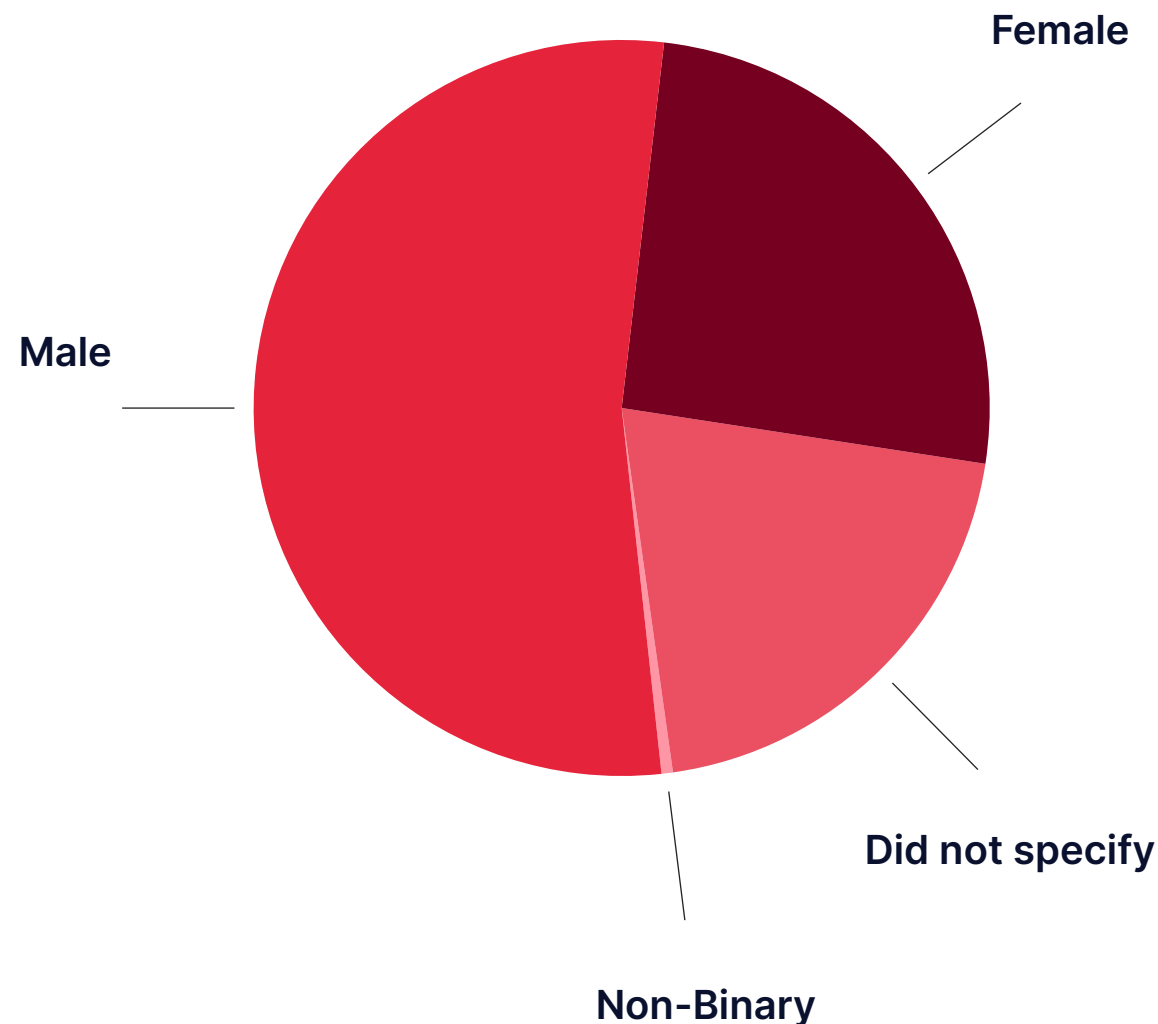

# Gender

Registrants for the WED Hackathon skewed predominantly **male**, with **1,606 men** signing up for the competition, compared to **767 women**. **15** individuals identified as **non-binary**.

**610 individuals** did not specify their gender identity, of which **64** selected *Prefer not to say* and **546** did not provide an answer to the question.

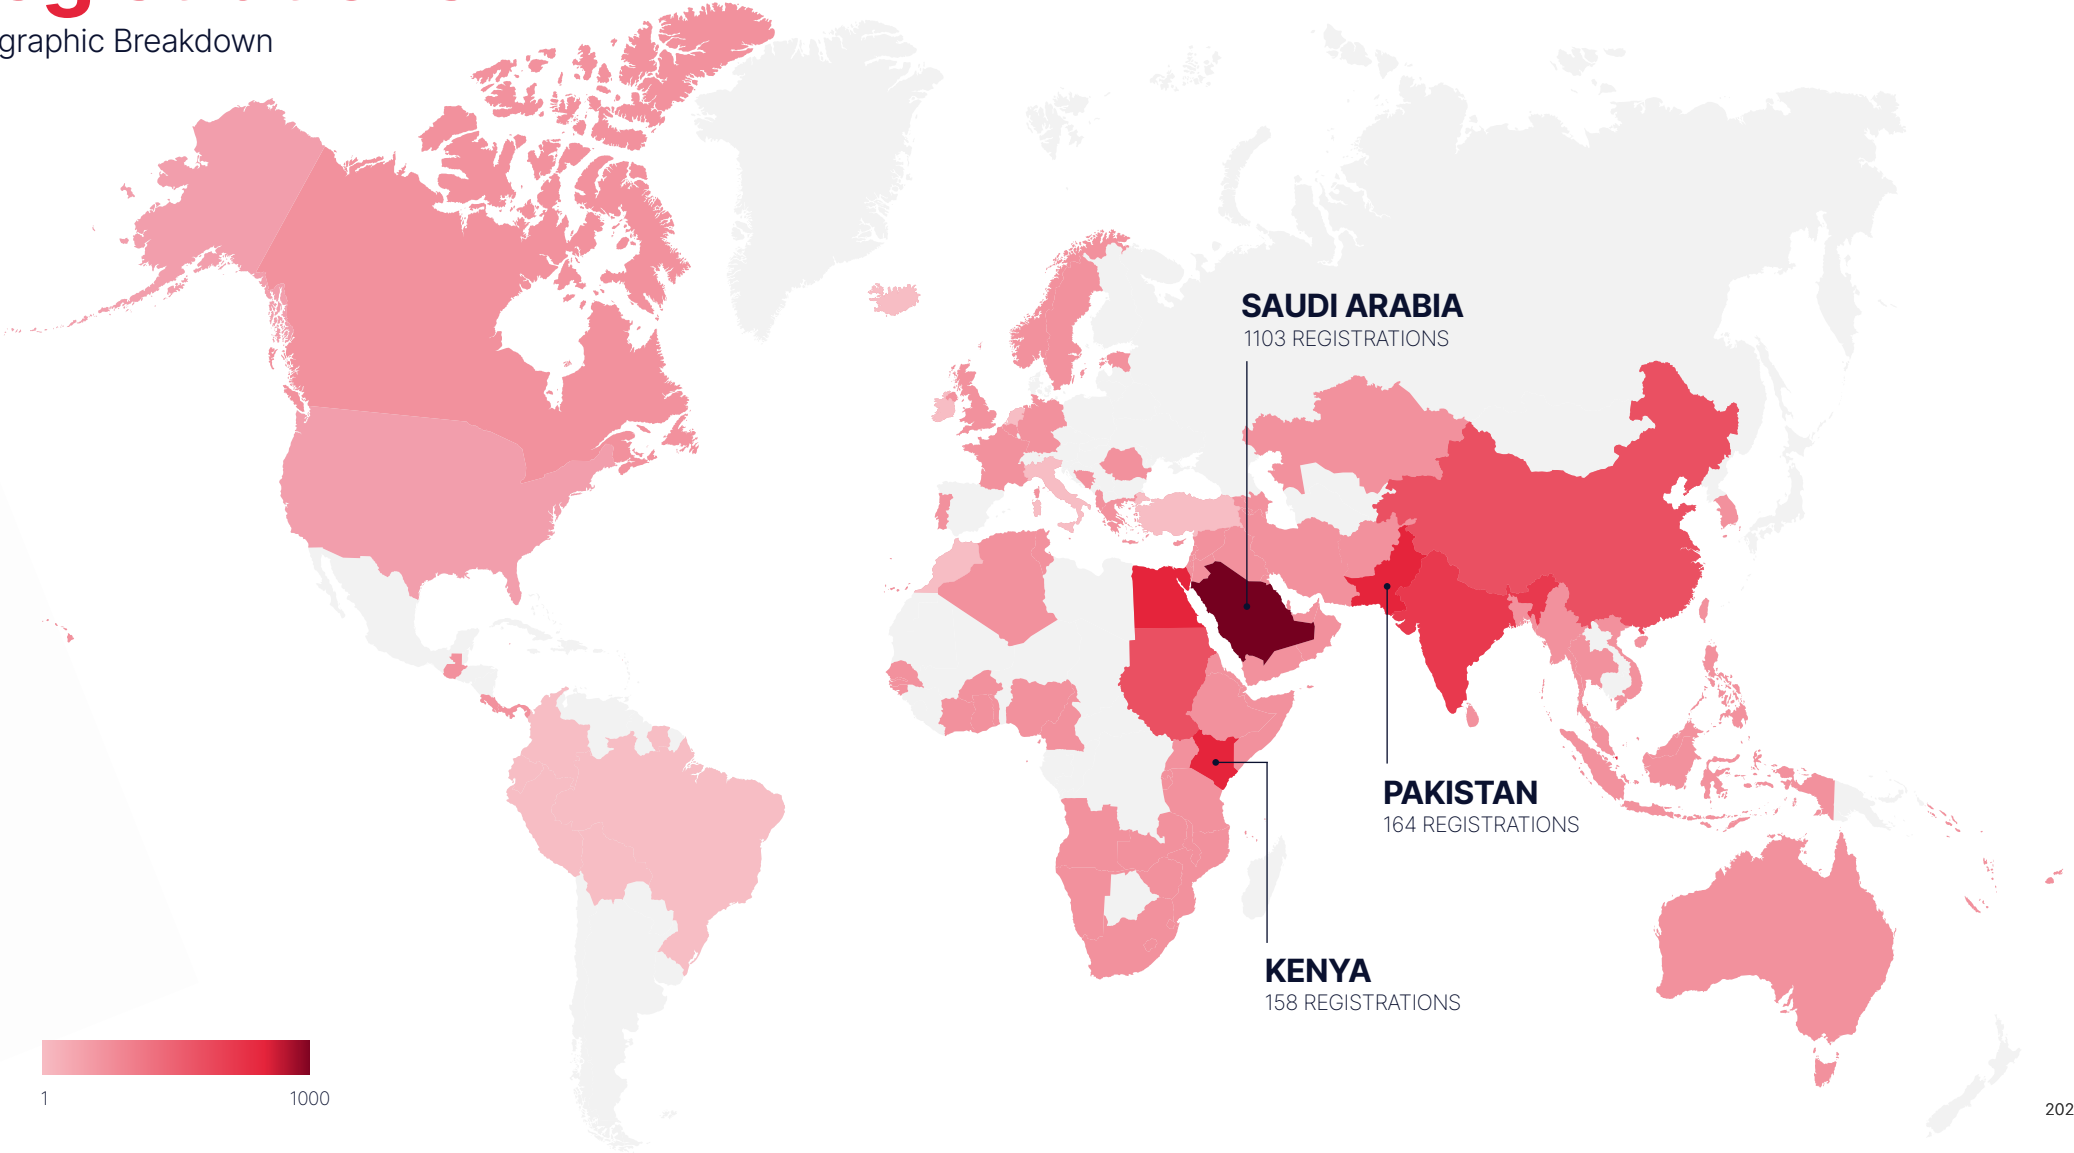

This is a slightly more even gender balance compared to 2024: **61% Male** (1,526), **32.4% Female** (814), **0.6% non-binary** (15), **1.63% Prefer not to say** (41), and **4.47% did not respond** (112).

However, **fewer women** registered for the 2025 Hackathon and a larger portion did not specify their gender identity.

# Registrations

Top 20 Registrations *(by country)* ►

# Comparison to 2024

In 2025, registrations were received from **90 countries**, similar to the **91 countries** represented in the 2024 Hackathon.

In the top 15, several nations are present across both years: **Kenya, India, Ghana, The Philippines, Belgium, UAE, Bahrain** and **Singapore**. For both years, **Africa, Asia** and the **Middle East** were the most common regions for registrations.

The significant number of registrations from **Saudi Arabia** in 2025 appears to be an anomaly, with only 1 registration from the country in 2024. The registrations were from students at **various universities** across Saudi Arabia, as well as **international students\*** studying in other countries.

Some nations had a noticeable drop from the previous year: with **Canada** dropping from **250 registrations** in 2024 to only 26 in 2025.

*\*The presence of international students may explain the discrepancy between registrations and submissions. During registration, the individual is asked to list their country of origin, whereas during the submission phase the teams provide the country of their study institution.*

## 2024

	Country	Registrations
1	Kenya	444
2	India	371

Top 15 Registrations (by country) ▲

# Social Media

# Social Media

A promotional campaign was developed to raise awareness about the Hackathon. The posts directed users to sign-up for the competition on the event registration page.

The campaign was developed in four key UN Languages: **English**, **French**, **Spanish**, and **Arabic**.

# Campaign Results

Over a 6-week advertising campaign, our social media adverts reached over **2.5 million users**.

Link Clicks	Reach	Video Views	Frequency	Cost per click
365,391 Clicks	2,605,415 Users	297,228 Views	2.39	\$0.01 AUD per Click

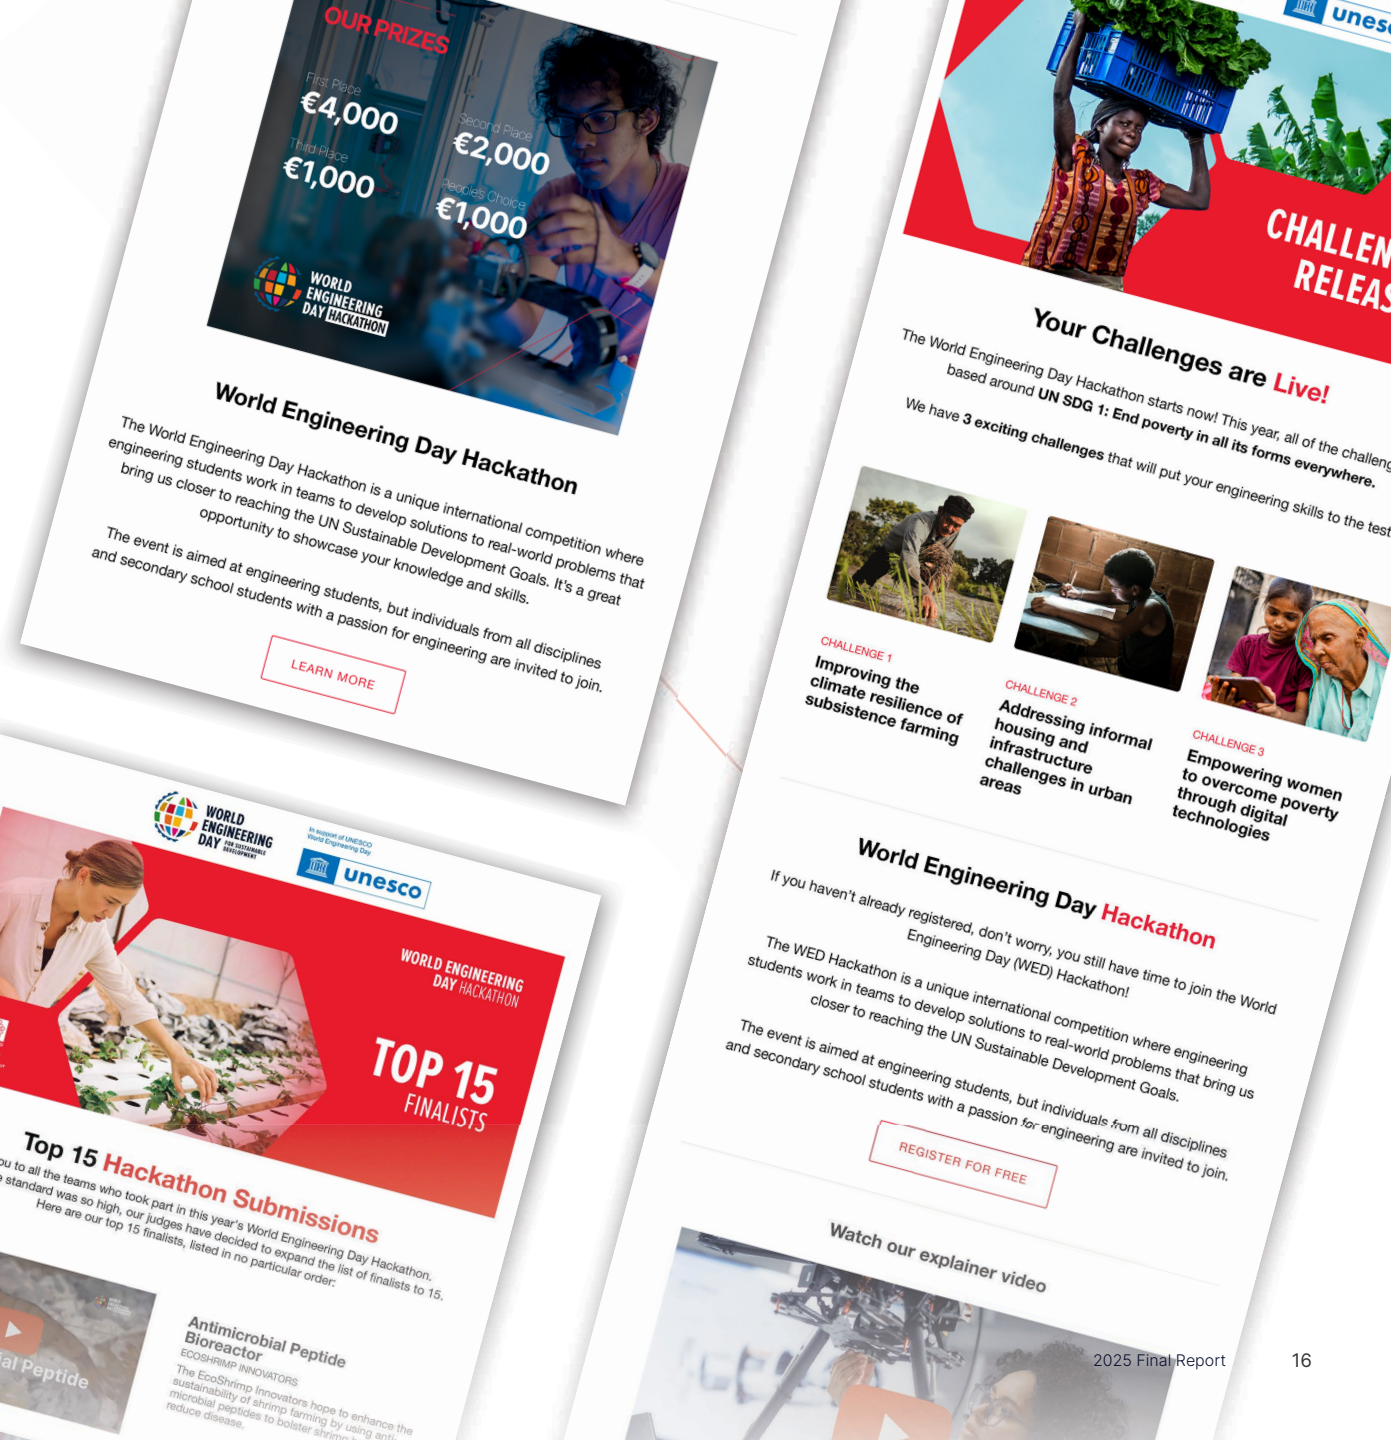

# Email Marketing

# Email Marketing

Over **20 marketing emails** were sent promoting the Hackathon and the public vote. Emails were sent via both **Mailchimp** and **Humanitix** to ensure registrants did not miss the event.

During the Hackathon, several reminder emails were sent highlighting the submission deadline and informing teams with submissions in drafts to submit their entry.

**2,373 new contacts** were added to the email audience list.

# Submissions

# Hackathon Submissions

The Hackathon commenced on **12 November 2024**, with the release of the three challenges. The Hackathon closed at midnight on **26 November 2024**.

**161 entries** were submitted over the course of the Hackathon. After review, **142 teams** were approved and entered into the preliminary round of judging.

**556 participants** took part in the Hackathon, from across **33 countries**.

## HEATWAVES

Intense periods of heat are **projected to worsen** in all regions of the world: 1 in 20 year events are expected to be hotter, while periods of extreme temperature considered unusual today will **become the norm**.

## CHALLENGE 2

**Addressing informal housing and infrastructure challenges in urban areas**

## WHAT CAN BE DONE?

Addressing this issue requires understanding **existing farming practices**, as well as empathising with the **lived experience** of vulnerable communities facing an uncertain future due to climate change.

**Women** are particularly vulnerable in small rural farming communities and usually carry a greater share of the workload in addition to their household and family responsibilities.

**Can you support communities most vulnerable to the impacts of climate change to maintain sustainable food production?**

# Submissions

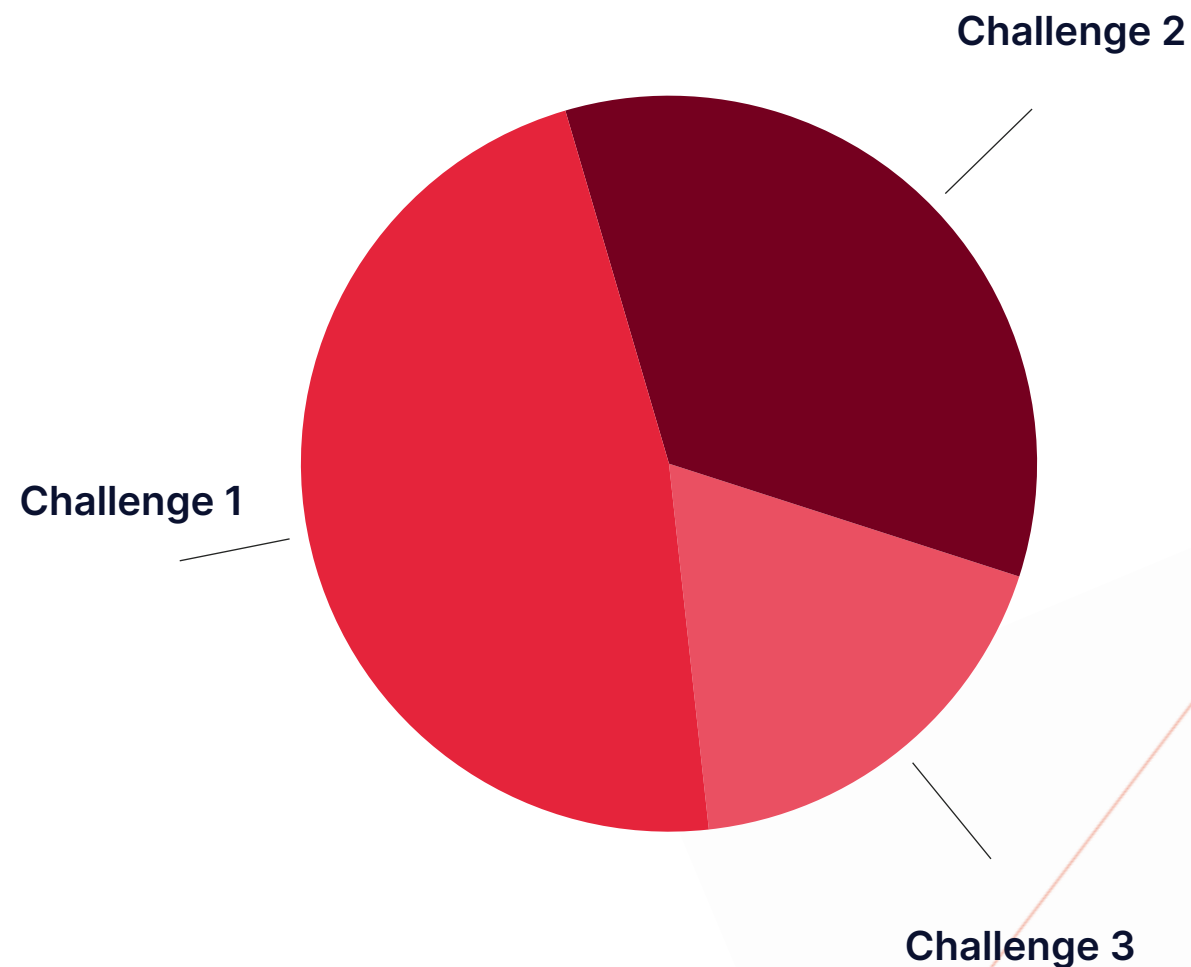

## Geographic Breakdown

**33 countries** were represented among the 142 Hackathon teams, up from **28** the year before. **Kenya** was the most represented country, with **17 teams**, followed by **Singapore** with **15 teams**, and **The Philippines** with **14 teams**.

**Asia** was the most represented region, at **43%** of teams, followed by **Africa** at **24%** of teams, and the **Middle East** with **14%** of teams.

## Challenge Breakdown

Challenge 1 was the **most popular challenge**, selected by **67 teams**. Challenge 2 was selected by **49 teams**, and Challenge 3 was selected by **26 teams**.

# Geographic Breakdown

Data Tables

Hackathon Team Submissions (by region) ▾

Region	Teams	Percent

# Hackathon Registrations vs Team Submissions\*

\*For clarity, nations with fewer than 10 registrations and zero team submissions have been excluded from the chart.

# Judges

**44 judges** were invited to take part in the Hackathon, including **40 preliminary judges**, and **4 final round judges**.

The preliminary judges selected **15 finalists** from the initial pool of **142 teams**.

A **welcome message** from the judges was created and released on social media.

[SEE ALL JUDGES](#)

# Finalists

The 15 finalists were announced on 7 February. **11 countries** were represented in the final round. **The Philippines** was the most represented nation, with **4 teams** in the final round.

**14 universities** were represented in the final round, with **Batangas State University** in the Philippines having **3 teams** in the final.

Challenges 1 and 2 were equally represented in the final, with **7 teams** each. Only **1 team** that selected challenge 3 was chosen for the final round.

# Winning Teams

On 4th March, the top 3 winning entries were announced live at the World Engineering Day event in Paris:

## 1ST PLACE

### ManufacturingBox

ManufacturingBox

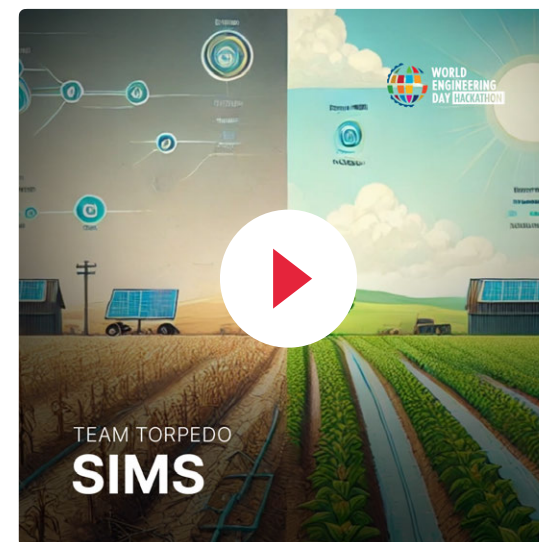

## 2ND PLACE

### ECO BEADa

Team ECO BEADa

## 3RD PLACE

### SIMS

Team Torpedo

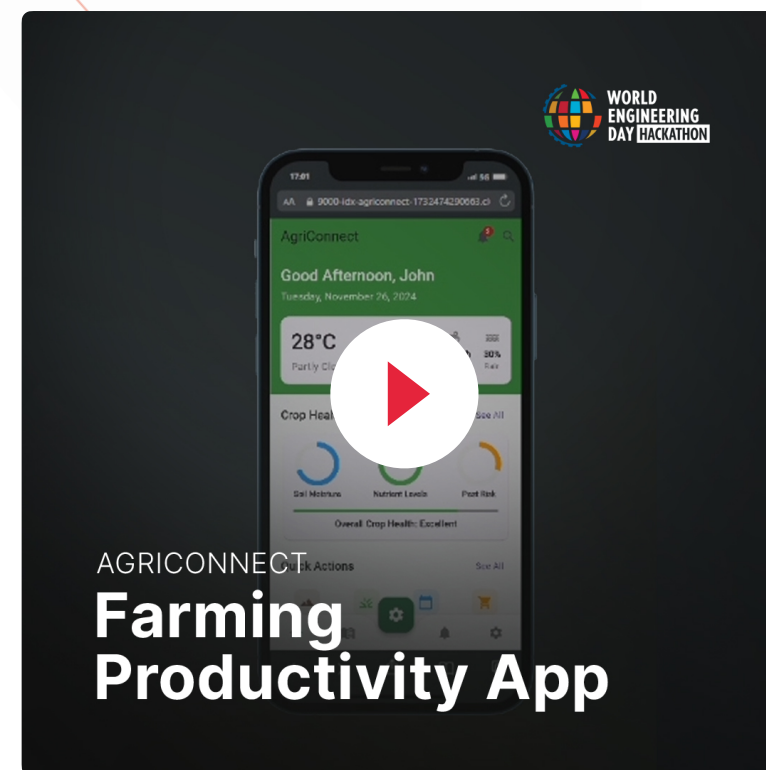

# Public Vote

# Public Vote

For the first time, members of the public were allowed to vote for their favourite Hackathon entry. The winning entry would be awarded the **People's Choice** prize.

The voting period ran from **16th December 2024 - 3rd March 2025**. Over the 3-month period, **7,594 votes** were cast by the public.

**AgriConnect**, a Ghanaian/French team, won the People's Choice prize with **1,227 votes**.

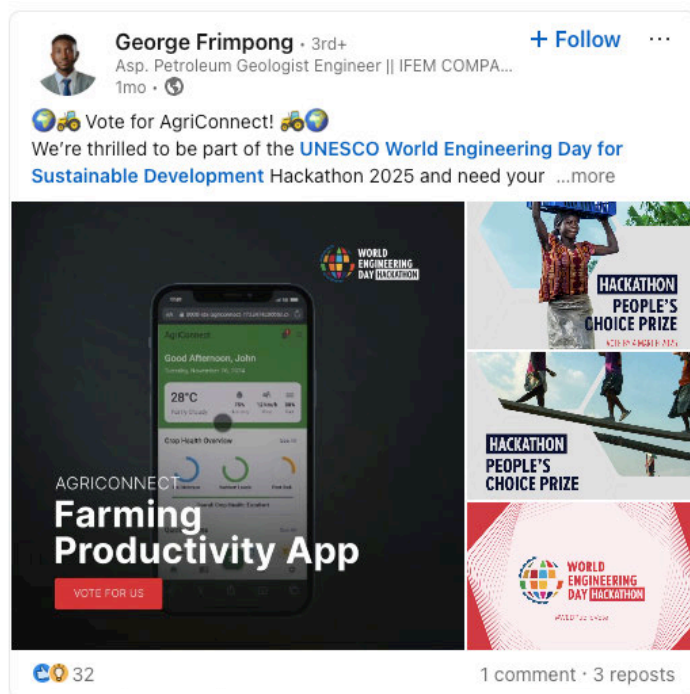

## AgriConnect

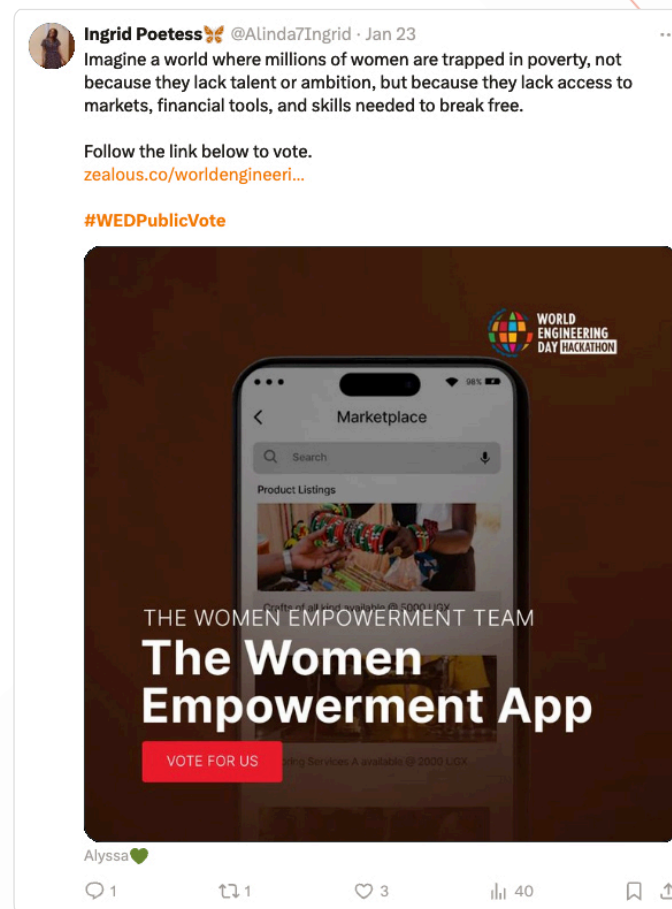

People's Choice Winner

# Social Media Promotion

Teams were provided social media tiles and invited to promote their entries on social media channels using the hashtag **#WEDPublicVote**

**AGRICONNECT**  
GHANA/FRANCE

**The Women Empowerment App**  
Uganda

**DocPal**  
Zimbabwe

# Certificates

# Certificates

Each participant received a personalised certificate to recognise their participation in the Hackathon. Specially-designed certificates were sent to each of the finalists and to the team members for the four prize-winning entries.

Certificates were also created for all judges, as a mark of appreciation for their support.

# World Engineering Day

The background is a dark navy blue with several large, overlapping, semi-transparent geometric shapes in a deep purple or indigo color. These shapes include a hexagon in the top left, a large irregular polygon in the top right, a large trapezoid-like shape in the bottom left, and a smaller hexagon in the bottom right. The word "Website" is centered in a white, bold, sans-serif font.

# Website

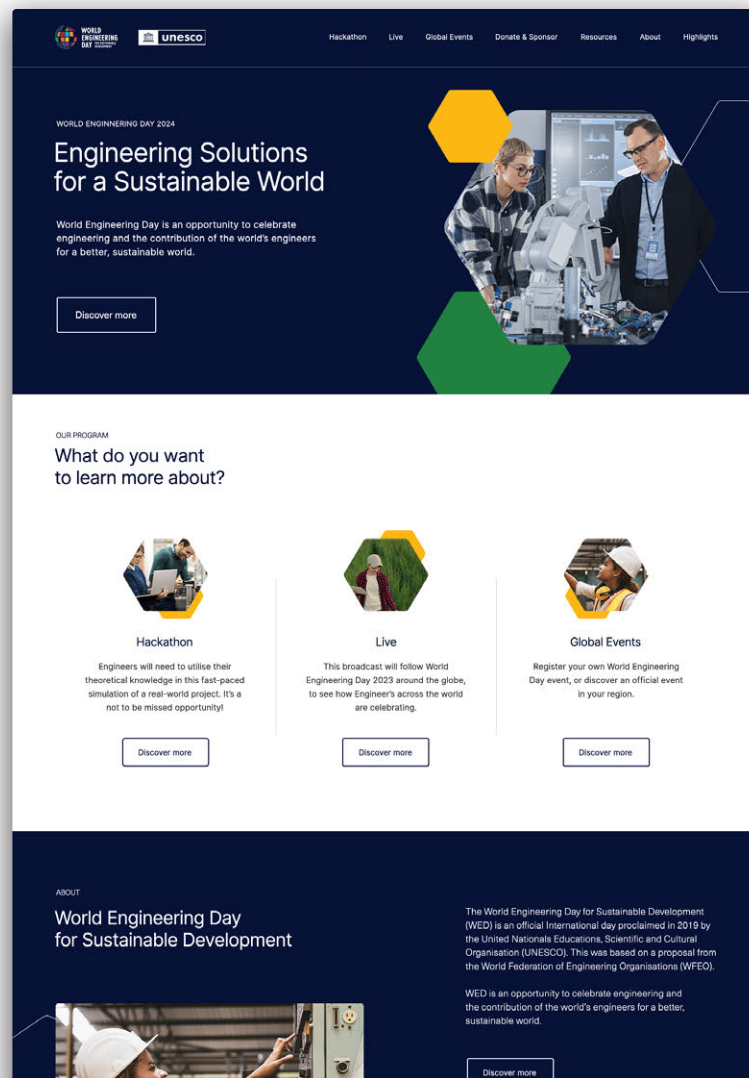

# Website Redesign

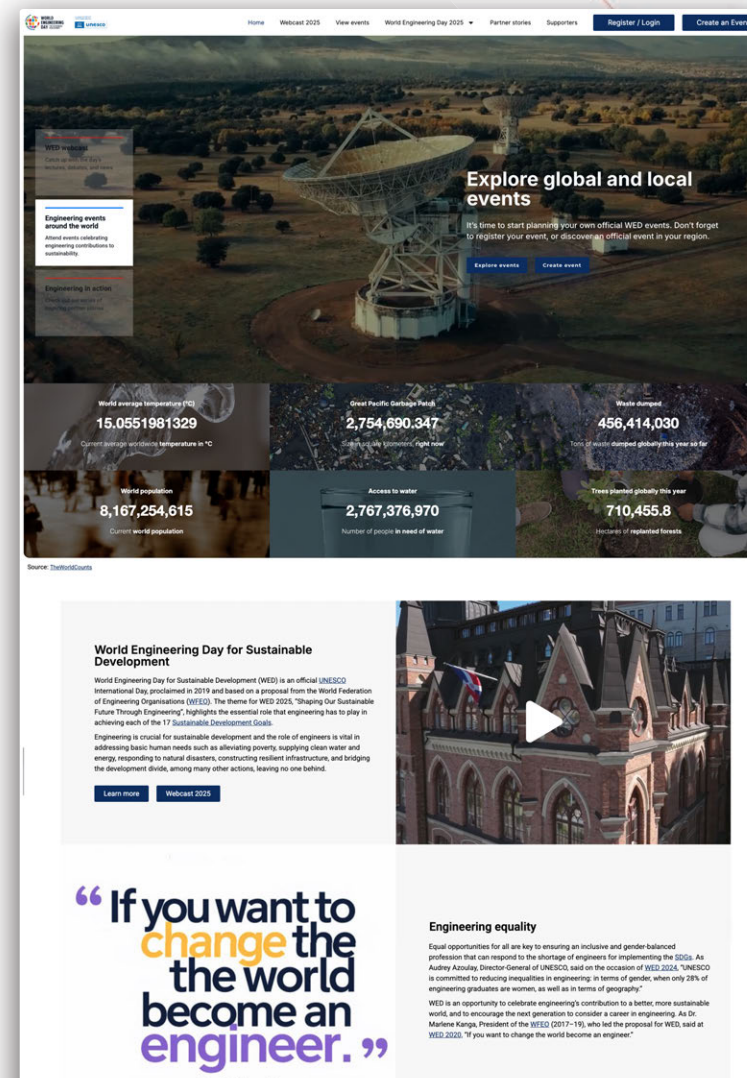

The Big Creative supported **St James's House** in transitioning the World Engineering Day website to an updated design.

Support was provided on copywriting, image selection, and layout design. The Big Creative was also heavily involved in the design of the **Hackathon** and **Public Vote** landing pages.

The word "Email" is centered in the middle of the image in a white, bold, sans-serif font.

# Email

# Email Marketing

**5 marketing emails** were sent promoting the World Engineering Day event.

**2,373 new contacts** were added to the email audience list.

# Social Media

# General Promotion

The social media campaign focused on raising awareness about the global stream on the 4th March and key events occurring on the day.

In the run up to World Engineering Day, a two week countdown to the event was launched on social media channels directing users to the WED website and livestream.

The campaign also highlighted this year's theme, *Shaping Our Sustainable Future Through Engineering*.

**World Engineering Day**

What I find most rewarding about my work as an engineer is the opportunity to tackle real-world challenges. Every day, I get to use my creativity, communication skills, and technical knowledge to develop solutions, both individually and as part of a team. It's incredibly satisfying to see a project I've designed and built become the answer to a problem I set out to solve.

# Events

# WED Events

A social media campaign was launched informing users how to create and register events marking World Engineering Day. Each post directed users to the Events hub on the World Engineering Day website.

**40 events** held on or in celebration of World Engineering Day were registered on the website Events hub.

# Recommendations

# Recommendations

A list of recommendations for future WED events has been prepared:

## 1 Earlier planning phase

We recommend that the deliberation on the theme for World Engineering Day 2026 and the Hackathon begins at an earlier date, ideally by July/August.

This will allow greater time to plan and prepare a full marketing campaign for the events. It will also leave greater time to develop the Hackathon challenges and prepare content for the website.

## 3 Minimum team members

A few participants entered this year's Hackathon without a team, resulting in them receiving no points for the *Successful team collaboration* criteria.

Currently, the rules just advise participants to form teams of 3-5, but do not set a minimum. We recommend the rules specify: *Teams must consist of at least 3-5 members.*

## 2 Clearer entry conditions

In this year's Hackathon, several entries were submitted as part of pre-existing research projects. This undermines the spirit of the competition and puts teams who developed their project within just the 2 week period at a disadvantage.

Currently, there is no rule specifying that a Hackathon must be an original solution. We recommend adding the following condition to the rules: *All submissions must be fully original and developed within the 2 week Hackathon period. The solutions cannot be pre-existing projects or based solely on self-published research.*

## 4 Provide licensed audio-visual content

Though we requested that entrants only feature copyright-free material in their submissions, several teams submitted projects featuring copyrighted assets. This meant these projects could not be promoted on social media, and could have led to copyright issues.

We recommend that the teams are provided with a library of copyright-free video footage and audio tracks for use in their submissions once the challenges are released. The footage would cover a variety of topics related to the three challenges.

# Recommendations

A list of recommendations for future WED events has been prepared:

## 5 Update Public Vote

As the current format of the public vote has several issues, we would recommend revising the competition. One potential solution would be to limit the public vote to just the finalists. For this solution, the finalists must be announced earlier, ideally in **January**, to allow enough time for the public to take place before 4th March.

The other option would be to include all accepted entrants, but to create **more stringent rules** for acceptance, so that only suitable teams are approved.

A clearer closing date for the public vote should also be specified, ideally 2 weeks before 4 March.

## 7 More team forming methods

In this year's Hackathon, some participants had difficulty finding team members. Currently, the dedicated [Facebook group](#) is the only offered method for forming teams, which excludes participants without a Facebook account.

We recommend other methods are made available to participants, such as a dedicated Slack portal or Discord channel.

## 6 PhD and School-level Participants

PhD and secondary school students were permitted to participate in this year's Hackathon. However, due to the vast difference in each group's level of engineering expertise compared to the majority of participants, there was a slight imbalance in the contest.

We would propose a simplified contest targeting just secondary school students. This would allow the competition to involve more schools and younger engineers in World Engineering Day. We would also propose a more in-depth research-based contest for Doctoral students. As this is a more time-intensive recommendation, the proposed contest could occur at a different time of year or in a more simplified format, e.g. single challenge contest, with only one judging round.

## 8 Mandatory Data Reporting

Currently during registration, the gender and field of study questions are voluntary. This meant both questions had a large proportion of null responses.

We recommend that these questions are both made mandatory, to allow for more accurate analysis of registration data. For field of study, a text field should be included for those who select *Other* so that they can add their course.

# Recommendations

A list of recommendations for future WED events has been prepared:

## 9 Greater contact with Academia

For the 2026 WED Hackathon, greater focus should be placed on connecting with representatives in academia, such as university staff and academic networks.

By having a greater relationship with these groups, students at these institutions are more likely to be made aware of World Engineering Day and the Hackathon.

## 11 Multi-lingual Campaign

In this year's Hackathon, the social media campaign was developed in multiple UN languages. However, most elements of the campaign were still limited to English, including the World Engineering Day website, the Humanitix registration page, and Zealous event portal.

We recommend that all relevant campaign elements are localised into the UN languages to enable greater access to the contest.

## 10 More Communication Funnels

Beyond social media and email marketing, further communication methods should be utilised for future marketing campaigns, such as SMS messaging, Academic networks, and journalistic networks.

Third-party marketing could also be attempted, such as providing social assets and marketing materials to World Engineering Day sponsors to share on their social media channels/networks.

## 12 Extend the Hackathon Submission Period

It has been noted that the two-week Hackathon Submission period in November is difficult for students in certain countries, (e.g. UK) due to scheduling conflicts with university coursework.

It is recommended to extend the submission period to 3 weeks.
